DIGITAL LITERACY PROJECT REPORT

Name: Aarna Gupta

Registration Number: 25BAI10095

Branch: B.TECH CSE(AI & ML)

Year: 1st Year

Course Code: CSE0001

Date: 25 March 2026

□ Introduction

This project focuses on digital literacy and aims to develop essential skills required to use digital tools effectively and safely. As a Digital Ambassador, the objective is to help students understand the importance of online platforms, communication, and cyber safety.

The project includes five tasks such as creating an infographic, building a digital portfolio, exploring platforms, drafting professional emails, and studying cybercrime. Each task provides practical knowledge about digital tools and responsible online behavior.

Overall, this project helps in improving awareness about safe internet practices and encourages the use of technology for academic and professional growth.

□ Task 1: Infographic

For this task, I created a digital literacy awareness infographic using Canva. The main objective of the infographic was to explain the concept of digital literacy and its importance for students.

The infographic includes topics such as the meaning of digital literacy, important digital skills, safe internet practices, and digital responsibility. I used simple language along with icons and colors to make the design visually appealing and easy to understand.

While creating the infographic, I found it interesting to explore different design elements like templates and layouts. However, arranging all the

content in a single page without making it look crowded was slightly challenging.

This task helped me improve my creativity and presentation skills. It also increased my understanding of how to communicate information effectively through visuals.

□ Task 2: Digital Portfolio

In this task, I created accounts on GitHub, LinkedIn, and Kaggle to build my digital portfolio. GitHub is used for storing and sharing projects, LinkedIn helps in building a professional network, and Kaggle is useful for improving coding skills.

On GitHub, I created a profile README that includes my personal details and learning goals. On LinkedIn, I added my education details such as my degree and institution. These platforms are important for creating a professional online presence.

In the future, I plan to use GitHub to upload my projects, LinkedIn to connect with professionals and explore opportunities, and Kaggle to improve my problem-solving skills. These platforms will support my academic and career development.

□ Task 3: Platforms

For this task, I explored coding and collaboration platforms such as HackerRank and Google Forms. I completed a beginner-level coding

problem on HackerRank, which helped me improve my logical thinking and understanding of programming basics.

I also created a Google Form titled "Digital Literacy Awareness Quiz" that includes five questions related to digital literacy and online safety. The form contains both multiple-choice and short-answer questions.

These tools are very helpful for students. HackerRank is useful for practising coding and preparing for placements, while Google Forms is helpful for creating surveys and quizzes. This task helped me understand how digital platforms can be used for learning and collaboration.

□ Task 4: Email Etiquette

Digital communication plays an important role in academic and professional life. Poor communication, such as unclear emails or informal language, can lead to misunderstandings and create a negative impression.

Writing professional emails with proper subject lines, greetings, and respectful tone is very important. It helps in conveying the message clearly and professionally.

This task helped me understand the importance of email etiquette and effective communication. It also taught me how to present ideas clearly and maintain professionalism in digital communication.

□ Task 5: Cybercrime

While researching cybercrime, I learned that phishing is a common and dangerous online threat. Many fake emails and websites look real, making it easy for people to fall into scams.

I was surprised to see how simple mistakes, like clicking on unknown links, can lead to serious consequences such as financial loss or identity theft.

This task made me more aware of online safety. One habit I will change is that I will always verify the source before clicking any link or sharing personal information.

□ Conclusion

This project helped me gain knowledge about digital tools, online safety, and professional communication. I learned how to create a digital portfolio, use online platforms effectively, and communicate responsibly.

Each task improved my practical skills and awareness about digital literacy. The project also helped me understand the importance of maintaining a professional online presence.

Overall, this project has made me more confident and responsible in using digital technology for academic and professional purposes.
